HTML/CSS PROJECT

Thanks to the notions acquired in HTML / CSS I have created my website.
The site displays my portfolio in English and describes the path I am taking.

I created 2 pages:
- (Home, About, Projects, Profile).
- Contact.

I talk about my work experiences and my studies, and I also tell about myself, my passions, and my hobbies.

I structured the site starting from the Bio, I added the projects that I considered the best to show.

I have inserted more information about me with the addition of an image that portrays my face in the foreground and the CV created in HTML/ CSS.

I tried to make the site harmonious by proposing the same color scale.

In the contact form section, I entered "required" in the name and email.

The footer is composed of three social icons: Instagram, Facebook, and LinkedIn.

This project gave me essential skills in HTML/CSS.
Thanks for your attention, Arianna Polletta.
